

Tascus – Error Proofing MES Software

Increase Product Quality with Our Error Prevention MES Software for Manufacturing

Product errors and rework, cost manufacturers £1 Billion in 2017 alone. Use our comprehensive Manufacturing Execution System (MES) Software – Tascus to create high-quality products with minimum defects. Tascus reduces or eliminates time spent on rework, with manufacturing process control, traceability, operations management and quality control. This MES software lets you improve productivity by 30%, win new business with higher value customers and protect your brand reputation.

Tascus – Error Proofing MES Software

Our MES Software checks for errors throughout your production process -as opposed to just at the end- saving you time and reducing or eliminating rework

costs by preventing errors before they happen. Tascus also enables you to cut the cost of the rework that's unavoidable, by identifying faults at a much earlier stage in your production process.

Key Benefits

- **Cut Production Errors by 30%** with guided manufacturing assembly steps and process integrity checks. You won't have to suffer the headache of fixing production errors and rework after implementing our error proofing software, Tascus.
- **Reduce Costly Product Rework** by preventing product defects and profit from your reduced manufacturing costs.
- **Maintain Full Product Traceability.** Eliminate the expense of mass product recalls, as Tascus traces which faulty components have been fitted in your products. Therefore, you only need to recall the affected items.
- **Improve Product Quality** by standardising manufacturing operations with work instructions and functional testing.
- **Integrate Manufacturing Processes Easily and Quickly** by connecting directly to smart tools or adding sensors to manual processes.
- **Perform Quality Checks and Functional Tests that Ensure Errors are Found Early.** Be at ease in the knowledge that Tascus is in place, protecting your brand 24/7 so you don't have to worry.
